

AMENDMENTS TO THE SPECIFICATION

Please replace Paragraph [0031] with the following amended paragraph:

[0031] Here, the through holes **12** and **22** are provided in order to increase a combining operation with concrete. As shown in FIG. *1a*., there are shown the shapes of the through holes **12** and **22**. However, the shapes are not limited to the shapes of FIG. *1a* . The through holes **12** and **22** may be formed in a rectangular shape, a triangle shape and a diamond shape. In addition, in the case that a corner is formed at the through hole like a triangle shape, a rectangular shape and a diamond, as show in FIG. *1b*, a rounding portion **24** [[14]] is formed in order to prevent a certain fatigue breakdown by a corner stress.

Please replace Paragraph [0037] with the following amended paragraph:

[0037] The through holes **22** formed at the web **20** can be formed in various shapes like the first embodiment of the present invention. In the case that a corner portion is formed at the through holes in a triangle shape, a rectangular shape, and a diamond shape, a fatigue breakage may occur by the corner stress concentration as show in FIG *2b*. Therefore, a rounding portion **24** [[14]] is provided in order to decentralize the stress concentration.
